

FCC:

I understand that the National Assoc of Broadcasters is opposing certain content that can be provided by satellite radio, specifically instant traffic and weather.

Please register my opposition to HR4026 and any type of legislation or regulation that limits the legitimate content of satellite radio. Satellite radio has provided me with much broader listening options as well as useful and entertaining content. When travelling I do not have to spend time searching the dial for the content I want or need.

As a citizen and a consumer I implore you to allow satellite radio to continue to expand their content.

Respectfully,

David Pokel
